Re: Mining and reclamation plan for Rocky Mountain Quartzite Limelight Green Flagstone/Building Stone Quarry located S.E. 1/4. S.E. 1/4. section 2, TWP 10N., R. 16 W. Box Elder County, Utah. Mineral lease #43106 held by Max Cooper.

During the next 5 years our quarry operation will not disturb a area of stone larger than already exposed. The operation will simply use established benches to quarry into the deposit from south to north on one bench and from west to east on the other bench. We estimate that the exposed deposit contains 20,000 tons of stone. With a 20% waste factor there is 16,000 tons of recoverable stone. Our estimated sales/production is from 1,500 to 2,000 tons per year.

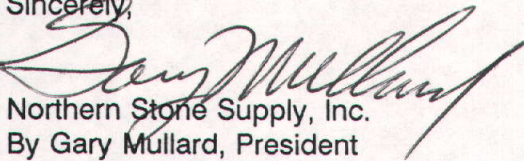

An ideal area to dispose of waste stone is a gully located along the edge of the south bench. This area would not cover future quarriable stone and would blend in nicely with the surrounding terrain.

Our methods are quite simple. The stone is loosened from the quarry face with a track mounted hydraulic excavator or a smaller backhoe and wind rowed along the level bench or working landing. From there it is a matter of the workers hand splitting, sorting and packaging in pallets for forklift handling. All waste materials will be placed in dump bins that will be disposed of in the designated disposal area. The entire property will be kept neat and orderly at all times. All scrap, paper, cans and food waste will be contained in proper containers and hauled away from the premises to a disposal site on a regular basis.

No permanent structures are planned at the quarry site, only one small travel type trailer and a trailer-van for weather proof tool and equipment storage. No new roads are planned. We will simply grade any existing roads for proper drainage and contour to prevent erosion.

Before we start work in April we will clean up junk left by previous operations and do site grading as necessary. I believe we can answer any other questions or concerns you might have at our on site meeting in April.

Sincerely,

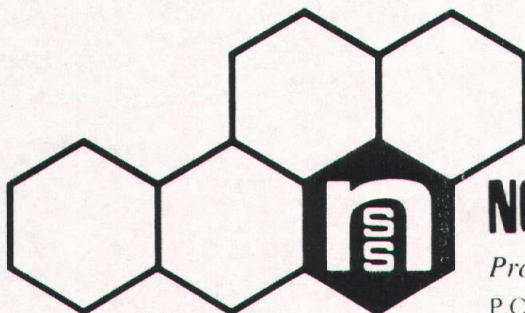

Northern Stone Supply, Inc.
